Job Description

Job Description

Carbon Management Canada (CMC) is hiring a Manager, Carbontech to drive carbontech acceleration and adoption through startup programming and through research, communication and advisory work. In this role you will manage, mentor, and support the carbontech team and collaborate with partner organizations on key deliverables. Key responsibilities and duties of the position include executing on the carbonNEXT program to support emerging CCUS solutions, and leading fee-for-service research projects on the carbon technology market. The day-to-day tasks of the Manager, Carbontech include:

- Project management and client engagement for the carbonNEXT program, the carbon capture consortium and sectoral research projects
- Undertaking and managing technical, policy and market research projects and deliverables
- Representing CMC at events, workshops, etc.
- Collaborating on program and training design with the CMC carbontech team and external partners
- Supporting carbontech business development efforts through partner engagement
- Directing and supporting carbonTALK monthly webinar series
- Other duties as assigned

Required qualifications

- Degree in science, engineering, economics and/or management
- Extensive experience in project management and program development, ideally with multi-disciplinary and/or multi-stakeholder groups, PMP and/or management or engineering consulting experience preferred
- Experience communicating technical information clearly and concisely
- Demonstrated ability to coordinate the activities of many contributors to advance projects
- Experience managing staff and clients considered an asset
- Ability to prioritize multiple projects with strong time management skills

- Ability to take a proactive role executing and completing projects
- Familiarity with CCUS and cleantech
- Commitment to CMC's mission of providing experience, applied research, knowledge and infrastructure to accelerate emissions reduction results.

About CMC and carbonNEXT

Carbon Management Canada (CMC) is a national, not-for-profit organization working to develop and deploy emissions reduction solutions and support the Canadian industry. We assist innovators in developing methane monitoring, carbon capture, utilization and storage (CCUS), and subsurface monitoring technologies, and provide techno-economic analysis to companies, investors, and governments to direct research, development, investment, and policymaking. CMC aims to move solutions more quickly from research to market, thereby growing the Canadian economy, increasing Canada's competitiveness in world markets, and supporting practical, feasible, and economically viable industrial emissions reductions.

carbonNEXT is Canada's carbontech commercialization hub for CCUS and monitoring technologies. CMC and Foresight Canada share a goal to accelerate CCUS ventures with one-window access to training and mentoring, CCUS technology validation facilities, industry partners and investors, thought leadership and sector marketing. Established in 2021, carbonNEXT builds on Canada's early leadership in CCUS technology development and project deployment and brings partners together to energize innovation, accelerate commercialization, and fast-track adoption of carbontech solutions.
