Job Description

Carbon Management Canada (CMC) is looking for a technology and business analyst who will help CMC in the creation of proposals, reports and presentations on topics within the CCUS field. The analyst will support the development and progression of CMC projects, techno-economic assessments and life cycle analyses.

Key responsibilities and duties of the position include:

- User and market research;
- Support clients in assessing their position in the market and advising on expansion to new markets and/or customer segments;
- Working with CMC's team to provide insight and inform decision making and business planning;
- Researching provincial and federal policies and regulations that may impact the uptake of technologies;
- Research and understand a technology's competitive positioning by identifying and benchmarking competitor technologies;
- Assess the applicability of technologies to industries using cost, operation and technical data;
- Evaluate the economics of technologies;
- Conduct life cycle analyses to help clients understand where and how to focus on decarbonization strategies;
- Develop metrics for business planning; and
- Identify regulatory requirements and barriers.

Other tasks may include:

- Feasibility studies;
- Developing presentations, infographics and reports;
- Conducting data analysis;
- Supporting proposal development;
- Deliver project management support;

- Support the development of CMC's strategy and vision and provide assistance to CMC's communications team to highlight services and expertise; and
- Other duties as assigned.

Required Qualification and Skills:

- Business knowledge and a background in engineering or science (preferred);
- Able to travel to CMC's Newell County Facility to perform supervised field duties as required;
- Willingness to learn new things, take on new challenges and use research skills;
- Strong interpersonal skills;
- Exceptional writing and presentation skills;
- Data analysis skills; and
- Ability to work independently and as part of a team, with project management and time management skills.

About CMC

Carbon Management Canada (CMC) is a national, not-for-profit organization working to develop and deploy emissions reduction solutions and support the Canadian industry. We assist innovators in developing methane monitoring, carbon capture, utilization and storage (CCUS), and subsurface monitoring technologies, and provide techno-economic analysis to companies, investors, and governments to direct research, development, investment, and policymaking. CMC aims to move solutions more quickly from research to market, thereby growing the Canadian economy, increasing Canada's competitiveness in world markets, and supporting practical, feasible, and economically viable industrial emissions reductions.

CMC is an equal opportunity employer and prohibits discrimination and harassment of any kind. All employment decisions including hiring, promotions, demotions, layoffs or terminations, compensation recruitment and selection for training or professional development are based on business needs, job requirements and individual qualification without regard to race, colour, religion or belief, age, physical or mental disability, sex, marital status, ancestry, national origin, citizenship, pregnancy, sexual orientation, or any other characteristic protected by federal, provincial, or municipal law.
